

National plans on control of non-communicable diseases and cancers

Albania • 2016

Albania's National Program on Prevention and Control of NCDs 2016–2020 aimed to reduce the burden of non-communicable diseases (NCDs) such as cardiovascular diseases, diabetes, and cancer. The program targeted modifiable risk factors like unhealthy diets and physical inactivity, with the goal of decreasing premature mortality from NCDs. Developed by the Ministry of Health with contributions from various sectors and supported by WHO, the program was national and cross-sectoral, involving stakeholders from government, education, agriculture, and other departments. Key features included promoting healthy lifestyles, improving healthcare services, and enhancing disease surveillance. Implementation strategies involved scaling up interventions, revising school curricula for better nutrition and physical education, and fostering community-level physical activities. The program also focused on training healthcare personnel, especially in rural areas, to improve NCD prevention and control. The timeline spanned from 2016 to 2020.
